

Interactive Retail Analysis Dashboard

Overview

Interactive Retail Analysis Dashboard is a Power BI project developed to analyze retail business performance through interactive visualizations and KPI-driven reporting.

The project combines multiple analytical dashboards to provide insights into sales performance, customer behavior, product profitability, and regional business trends, enabling data-driven decision-making.

Dashboard Modules

Sales Analysis Dashboard

- Sales Performance Tracking
- Monthly Sales Trends
- Sales by Category, Segment, and Region

Product & Customer Analysis Dashboard

- Product Performance Analysis
- Customer Insights
- Segment Contribution Analysis
- Top Products and Customers

Profit Analysis Dashboard

- Profitability Tracking
- Profit by Category & Sub-Category
- Monthly Profit Trends
- Discount Impact Analysis

Regional Analysis Dashboard

- Regional Performance Comparison
- Geographic Sales Analysis
- State and Region-wise Performance Monitoring

Key KPIs

- Total Sales
- Total Profit
- Total Orders
- Total Customers
- Products Sold
- Average Order Value
- Average Profit per Product
- Average Delivery Days

- Discount Analysis

Tools & Technologies

- Power BI Desktop
- Power Query
- DAX
- Data Modeling
- Data Visualization

Business Value

- Monitor business performance through interactive dashboards.
- Identify high-performing products, customers, and regions.
- Analyze sales and profit trends over time.
- Evaluate the impact of discounts on profitability.
- Support strategic business decision-making.

Skills Demonstrated

Power BI • DAX • Data Modeling • KPI Reporting • Data Visualization • Business Intelligence • Customer Analytics • Profitability Analysis • Data Storytelling
